

Resource	API endpoint	Export	Import
Access tokens	Creates an access token for the current user		X
	Create account based on type in body content		X
	Create account by space ID		X
	Create account by space identifier		X
	Delete account by identifier		X
	Remove account by ID v1		X
	Delete account by ID in space accounts		X
	Delete account by ID v1 resource in space accounts ID v1		X
	Delete account in space		X
	Delete account by ID from specific space v1		X
	Get a list of accounts	X	
	Get a list of all accounts	X	
	Get a list of accounts by space ID	X	
	Get a list of all accounts by space ID	X	
	Get a list of accounts by space identifier ID	X	
	Get a list of all accounts by space identifier ID	X	
	Retrieve account by ID	X	
	Get account by ID details	X	
	Get account by ID in space identifier	X	
	List projects and deployments usage by account ID	X	
	List projects and deployments with account usages in space	X	
	Get account usages by space identifier and account id	X	
	Lists the Azure environments provided by the sdk	X	
	Fetch resources for account by ID	X	
	Get resource groups by account ID	X	
	List resource groups for account	X	
	List slots related to an Azure website with account and website details	X	
	Get website slots by ID and resource group name	X	
	List spaces slots associated with Azure web site	X	
	List storage accounts by account identifier	X	
	List storage accounts by Azure account ID	X	
	List storage accounts for Azure account	X	
	Get websites for account	X	
	Listed websites for account	X	
	List websites by account for space	X	
	Modify account by ID		X
	Update account details identified by the account ID		X
	Update account identified by the account ID		X
	Fetches account certificate public key	X	
	Retrieve account certificate public key	X	

Accounts	Get account certificate public key by ID	X	
	Create an action template create action template		X
	Create action template by space ID		X
	Create space action template		X
	Update action templates and runbook actions in bulk for a specific version of template		X
	Update deployment and runbook actions to specific version bulk		X
	Create server task update action template version bulk		X
	Delete action template and all versions by ID		X
	Delete action template and its versions by ID v1		X
	Delete action template and its versions		X
	Delete action template and versions by ID		X
	Delete action template by ID		X
	Delete action template and versions		X
	Get a list of categories	X	
	Get a list of categories by space ID	X	
	Get a list of categories by space identifier ID	X	
	Get a list of action templates	X	
	Get a list of action templates by space ID	X	
	Get a list of action templates by space identifier ID	X	
	Get action template version details	X	
	Get action template version by ID and version endpoint	X	
	Get specific action template version	X	
	Get all action templates from all with the template to get unique templates	X	
	Get all action templates by space ID	X	
	Fetch all action templates for a space	X	
	Get versions of action template by ID	X	
	Get action template versions by ID	X	
	Get all versions of an action template by ID	X	
	Get action template by identifier	X	
	Get action template by ID v1 details	X	
	Get action template details by ID	X	
	Get action template by ID from space and action ID v1	X	
	Get action template by ID from space and action template ID	X	
	Get action template by ID v1	X	
	Get action template version logo by type or ID and version	X	
	Get logo for specific action template version	X	
	Get action template version logo by ID	X	
	Get latest action template logo	X	
	Get action template logo by ID details	X	
	Get action template logo detail by ID	X	

	Get action template usages by ID	X	
	Get action template usage details by space and ID	X	
	Retrieve action template usage details	X	
	List action templates by search	X	
	Get action templates search action templates	X	
	Get action templates by search term	X	
	Modify action template by ID		X
	Update action template by ID		X
	Update action template in space		X
	Update action template and runbook actions to specific version		X
	Update deployment and runbook actions to a specific version of the action template for space ID and action update		X
	Update action template version for specific action ID		X
	Update action template logo by ID		X
	Update action template logo for latest version		X
	Update action template logo by ID handler		X
	Update logo for action template by ID		X
	Update action template logo by ID and space ID		X
Action templates	Update action template logo by ID in space action templates		X
	Generates a new API key for the specified user the API key returned in the result must be saved by the caller, as it cannot be retrieved subsequently from the		X
	Get a API key resource by ID	X	
	Get a list of API keys	X	
	Get a list of v1	X	
API keys	Revokes an existing API key		X
	Create artifact request		X
	Create artifact in space		X
	Create artifact at space		X
	Remove artifact by ID		X
	Delete artifact by identifier in space		X
	Delete artifact by ID in space		X
	Get artifact by ID detail	X	
	Get artifact by ID using spaceid and ID	X	
	Get artifact by ID in space	X	
	Fetch artifact content by ID	X	
	Get artifact content by ID and space ID	X	
	Get artifact content by ID in space	X	
	Get all artifacts sorted by date from most recently to least recently created	X	
	Get artifacts by space ID	X	
	Get all space artifacts sorted by date	X	
	Update artifact details		X
	Update artifact details by ID		X

	Update artifact metadata		X
	Set content for artifact by ID handler		X
	Update content for artifact by ID		X
Artifacts	Set artifact content by ID		X
	Gets the audit stream configuration	X	
Audit stream	Modifies the audit stream configuration		X
	Get authentication providers	X	
Authentication	Given a URL query string, determines whether an external server (eg Okta) has initiated login and if so the provider's name		X
Azure devops	Azure devops connectivity check		X
	Create branch by project and name given project git branches		X
	Create branch for project git branches given project and name		X
	Create branch project git branches"		X
	Create branch by project base git ref new branch name v2		X
	Create branch from project git ref v2		X
	Create branch for project git ref and new branch v2		X
	Get git branch details by name in project	X	
	Get git branch by name in project	X	
	Fetch branch details by name	X	
	Retrieve git commit by hash	X	
	Get git commit by hash details	X	
	Get git commit by hash by ID	X	
	Get git reference by name in project	X	
	Get git reference by name by ID	X	
	Get named git reference by name	X	
	Get git tag by name endpoint	X	
	Get git tag by name in project	X	
	Get git tag by name per project	X	
	Get git tags for project ID	X	
	Get project git tags for a project	X	
	Get git tags for project by ID	X	
	Get project branches list by ID	X	
	Get branches for project	X	
Branches	Get project git branches	X	
	Delete builds in bulk by IDs		X
	Delete build information records in bulk from space build information bulk depiction		X
	Delete build information records in bulk by IDs		X
	Create or update vcs info for package		X
	Update build information for package with vcs details		X
	Update build information for package		X
	Delete specific build information record by ID		X

	Delete specific build information record		X
	Delete build information record by ID		X
	Get build information for package	X	
	Get vcs build information records by package ID	X	
	Get vcs build information records for package	X	
	Get build information by ID	X	
	Get build vcs info for package	X	
Build information	Get build vcs information by ID	X	
	Asks the server if a single capability exists or not if the capability exists, an HTTP 200 (OK) will be returned if not, a 404 (not found) will be	X	
Capabilities	Asks the server to return a list of all the capabilities (commands and requests) it supports	X	
	Archive certificate by ID archiving		X
	Archive certificate by ID orchestrate v1		X
	Archive certificate entry by ID		X
	Get archived certificate by ID		X
	Archive certificate by ID in space		X
	Archive certificate by ID		X
	Generate a unique and descriptive endpoint name based on the existing name ' create a self signed certificate' and the relative URI '/certificates/generate':		X
	Generate self signed certificate for space		X
	Generate a unique endpoint name based on the existing name ' create a self-signed certificate' and the relative URI '/spaces/: space identifier/certificates		X
	Create certificate creation		X
	Create certificate for space		X
	Create certificate for space		X
	Remove certificate by ID		X
	Delete certificate by ID in space		X
	Delete certificate by ID for space		X
	Export certificate file by ID	X	
	Export certificate by ID and space ID	X	
	Export certificate by ID of a space	X	
	Get certificate by ID or thumbprint entifier	X	
	Get certificate by ID or thumbprint for space ID	X	
	Get certificate by ID or thumbprint in space	X	
	Get a certificate configuration by ID	X	
	Get a list of all certificates	X	
	Get a list of all certificates by space ID	X	
	Get a list of all certificates by space identifier ID	X	
	Get public certificate	X	
	Get the global certificate	X	
	Fetch certificate usages by ID	X	
	Fetch certificate usages by ID for a space	X	
	Get usages of certificate by ID	X	

Certificates	Get x509 certificates managed by Octopus	X	
	Get certificates list by space ID	X	
	Get x509 certificates for space identified certificates	X	
	Update certificate by ID		X
	Update certificate details by ID		X
	Update certificate by ID in spaces and certificates		X
	Replace certificate with another based on ID		X
	Replace certificate by ID in space		X
	Replace certificate in space by ID replace		X
	Requests the list of certificate configurations	X	
	Unarchives certificate by ID resourceful unarchiving		X
	Unarchives a certificate by ID		X
	Unarchive certificate by ID specified and unarchive		X
	Unarchives certificate by ID v1		X
	Unarchive certificate by ID in space		X
	Unarchives certificate in space		X
	Create channel creation channel at path channels		X
	Create project channel restriction		X
	Create channel for space ID		X
	Create channel within project channel		X
	Create space channel		X
	Create channel for space project channel		X
	Delete channelresource by ID		X
	Delete channelresource by ID for project channel		X
	Delete channelresource by ID v2 endpoint		X
	Delete channelresource by ID in space and channel		X
	Delete channelresource by ID in project channel by ID		X
	Delete a channelresource by IDv2		X
	Delete channelresource by ID in a space and channel		X
	Delete channel resource by ID for space and project		X
	Delete channelresource by ID in project channels v2		X
	Get channel by ID details	X	
	Get channel by ID data	X	
	Fetch channel by ID and space ID	X	
	Retrieve channel by ID for project	X	
	Retrieve channel by ID from specified space	X	
	Get channel by ID in project from space	X	
	Fetch project channels list	X	
	Get channels by project ID	X	
	Get channels by space project identifier	X	

	List channels catalog	X	
	Get a list of all channels	X	
	Retrieve channels by space ID	X	
	Get a list of all channels by space ID	X	
	List channels by space identifier	X	
	Get a list of all channels by space identifier ID	X	
	Test channel version rule against package version	X	
	Test channel version rule against package version applies	X	
	Test channel version rule against package version ID	X	
	Test channel version rule for package version against rule test path		X
	Test package version rule against channel		X
	Test channel version rule test functionality against provided package version		X
	Check git reference rule validation	X	
	Check git resource rule validation channel	X	
	Check git reference rule validation for channel	X	
	Validate git reference rule for channel ID	X	
	Get tests channel version rules info	X	
	Get tests channel version rules by space ID	X	
	Get tests channel version rules for space by identifier	X	
	Get tests channel version rules for rule test v1		X
	Get tests channel version rules configuration		X
	Get tests channel version rules by space identifier		X
	Update channel by ID channel ID		X
	Update channel details by ID in project channel		X
	Update channel details by ID		X
	Update channel details for specific project and channel ID		X
	Update channel details by ID in space and channel		X
Channels	Update channel by ID in project of space		X
Cloud template	Requests the metadata (ie, parameters and values) for a cloud template (eg, Cloudformation, Terraform, Azure arm template)		X
	Get a community action template by ID	X	
	Get a list of communityaction templates	X	
	Get community action template version by ID	X	
	Get template version by ID and template space ID	X	
	Gets the logo associated with the community step template	X	
	Get install community action template installation by ID		X
	Install community step template installation action space by ID		X
	Update installation status for community action template		X
Community action templates	Update installed community action template installation action template space ID		X
	Create a new policy		X
	Create new version of policy		X

	Modifies an existing policy		X
	Modify the activation status for a policy version		X
	Request the published versions for a policy	X	
	Requests a paginated set of compliancepolicyresource sorted by name	X	
Compliance policies	Requests a single compliancepolicyresource by slug and git reference	X	
	Returns a list of configuration section settings	X	
	Returns a single configuration section for the given ID	X	
	Returns a structure that describes how to dynamically render the configuration section	X	
	Returns the current configuration for a specific configuration section	X	
Configuration	Updates the configuration values for a specific configuration section		X
	Get Octopus dashboard information	X	
	Get Octopus dashboard info by ID	X	
	Get Octopus dashboard info	X	
	Get dynamic dashboard information (deprecated) for dashboard dynamic	X	
	Get dynamic dashboard information by space ID	X	
Dashboard	Get dynamic dashboard information for space	X	
	Fetch dashboard configuration details	X	
	Retrieve space dashboard configuration	X	
	Retrieve dashboard configuration by space identifier	X	
	Update dashboard configuration settings		X
	Update dashboard configuration by space ID		X
Dashboard configuration	Update space dashboard configuration		X
	Create deployment freeze deployment freeze		X
	Create deployment freeze by ID		X
	Deletes a deployment freeze		X
	Get a deployment freeze by ID	X	
	Get deploymentfreezes	X	
	Override deployment freeze to create deployment override		X
	Override deployment freeze to create a deployment for space		X
Deployment freeze	Override deployment freeze to create deployment in space		X
	Get release snapshot template for deployment process	X	
	Get release snapshot template deployment process template	X	
	Get release snapshot template for deployment process id	X	
	Get specific snapshotted deployment process by ID	X	
	Get specific snapshotted deployment process version by ID	X	
	Get snapshotted deployment process by ID	X	
	Get release creation or editing information for deployment process template	X	
	Get deployment process template info by project ID and git ref	X	
	Get release creation edit info template	X	
	Get release information template by git reference	X	

	Get information for release deployment process template	X	
	Get release information template by space project gitref deployment processes	X	
	Get deployment process details for project	X	
	Fetch deployment process by project ID`	X	
	Get project deployment process details by project ID	X	
	Get deployment process by version controlled project	X	
	Get deployment process for project version controlled by gitref	X	
	Get version controlled project deployment process	X	
	Get resolved deployment process for project by ID	X	
	Get resolved deployment process by ID	X	
	Get resolved deployment process for project version controlled by git ref	X	
	Get resolved deployment process for version controlled project by git reference	X	
	List deployment processes listing	X	
	List deployment processes by space ID	X	
	List deployment processes for space	X	
	Modify deployment process with ID		X
	Update deployment process for project by ID		X
	Update deployment process on project by git reference		X
	Update deployment process configuration by ID for space		X
	Update deployment process for a project		X
	Update deployment process configuration for project by ID and git reference		X
	Update deployment process configuration by ID and space identifier		X
	Update deployment process details by ID		X
	Update deployment process for git reference by space and project		X
	Validate deployment process for project		X
	Validate deployment process for project git reference		X
	Validate deployment process for tags compatibility		X
	Validate deployment process for common non blocking issues endpoint		X
	Validate deployment process for common non blocking issues in a project		X
Deployment processes	Validate deployment process for common non blocking issues		X
	Get deployment setting by ID	X	
	Get deployment settings for project by ID	X	
	Get deployment settings by ID and project git reference	X	
	Get deployment settings by ID hatz ehy	X	
	Get deployment settings by ID for project retrieval of deployment settings by ID for project	X	
	Get deployment settings by ID and git ref for project	X	
	Get deployment settings by ID for space identifier and ID	X	
	Get deployment settings by ID in project deployment settings	X	
	Get deployment settings by ID from specific project git ref	X	
	Update project deployment settings		X

	Update project deployment settings by project ID		X
	Update project deployment settings by git reference		X
	Update deployment settings for project ID		X
	Update deployment settings for project deploymentsettings		X
	Update deployment settings for project by git reference		X
	Update deployment settings of a project		X
	Update project deployment settings by project and space identifier		X
Deployment settings	Update deployment settings for project git reference		X
	Create deployment target tag deployment target tags		X
	Create deploymenttargettag for space		X
	Create deploymenttargettag for space		X
	Remove deploymenttargettag by tag identifier		X
	Remove deployment target tag for a specific space		X
	Remove deployment target tag by tag ID		X
	Get deploymenttargettag by ID or slug with tag ID or slug	X	
	Get deployment target tag by ID or slug from space ID and tag	X	
	Get deployment target tag by ID or slug for space	X	
	Get deployment target tags by IDs and machine ID	X	
	Get deployment target tags by deployment target tag IDs and machine ID	X	
Deployment target tags	Get deployment target tags by deploymenttargettag IDs and machine ID (deployment target ID) in space identifier	X	
	Create machine resource endpoint		X
	Create machine resource in space		X
	Create a machine resource in space		X
	Delete machine deployment target by ID		X
	Delete deployment target machine by ID		X
	Delete deployment target by ID		X
	Get a list of all machines	X	
	Fetch all machines of version 1	X	
	Get a list of all machines by space ID	X	
	Get machines by space ID and v1	X	
	Get a list of all machines by space identifier ID	X	
	Get machines by space identifier ID and version 1	X	
	Get a list of tasks	X	
	Get a list of machines tasks v1 by ID	X	
	Get a list of tasks by space ID	X	
	Get machines tasks by ID v1 by space endpoint	X	
	Get a list of tasks by space identifier ID	X	
	Get v1 tasks by space identifierid and machine ID	X	
	Get a list of latestdeployments	X	
	Get a list of latestdeployments by space ID	X	

	Get a list of latestdeployments by space identifier ID	X	
	Retrieve existing deployment target machine by ID	X	
	Get deployment target by machine ID	X	
	Get deployment target by ID	X	
	Get all operating system names for deployment targets	X	
	Get all operating system names by space ID for deployment targets	X	
	Get all operating system names for deployment targets within space	X	
	Get operating system shells for all deployment targets	X	
	Get all machine operating system shells for deployment targets	X	
	Get all operating system shell names of deployment targets by space identifier	X	
	Discover communication details of deployment target for installation	X	
	Discover communication details of a deployment target	X	
	Discover communication details for deployment target	X	
	List machines in space alphabetically by name	X	
	Get machines by space ID	X	
	List machines in space	X	
	List machine specific scoped variables	X	
	List machine scoped variables for given machine	X	
	List machine scoped variables by set names	X	
	Update deployment target Identified by ID specified on machine ID		X
	Update deployment target machine by ID		X
Deployment targets	Update deployment target by ID in space and machine ID		X
	Create deployment resource deployments		X
	Create deployment for v1 deployment API		X
	Create deployment for space		X
	Create deployment for space ID		X
	Create space deployment		X
	Create deployment for space identifier v1		X
	Create tenanted deployment for space ID		X
	Create tenanted deployment for space		X
	Create untenanted deployment for space ID		X
	Create new untenanted deployment for space by identifier		X
	Delete deployment by ID		X
	Delete deployment by ID		X
	Deletes deployment by ID		X
	Fetch deployment by ID	X	
	Get deployment by ID for space	X	
	Get deployment by ID for space	X	
	Get a list of deployments	X	
	Get a list of deployments by space ID	X	

Deployments	Get a list of deployments by space identifier ID	X	
	Toggle deprecation status for Octopus server: toggle deprecation status		X
Deprecations	Toggle deprecation status for Octopus server endpoint		X
	Search for active directory groups	X	
Directory services	Search for active directory users	X	
	Modifies the current dynamic extensions feature values		X
	Requests the current dynamic extensions feature metadata	X	
Dynamic extensions	Requests the current dynamic extensions feature values	X	
	Create environment by URI		X
	Create environment for space ID		X
	Create environment by space identifier		X
	Delete environment by ID		X
	Delete environment by ID in space		X
	Delete environemnt by identifier		X
	Get a list of environments	X	
	Get a list of all environments	X	
	Fetch environment versions list via /environments/all/v1	X	
	Get list of v1 environments	X	
	Get a list of environments by space ID	X	
	Get a list of all environments by space ID	X	
	Get spaces by space ID in all environments v1	X	
	Get list of v1 environments by space ID	X	
	Get a list of environments by space identifier ID	X	
	Get a list of all environments by space identifier ID	X	
	Get v1 list by space identifier ID and all environments	X	
	Get spaces v1 by space identifier ID	X	
	Get specific deployment environment by ID	X	
	Get deployment environment by ID	X	
	Get specific deployment environment data by ID	X	
	Get specific environment v2 by ID and space ID	X	
	Get specific environment by ID v2	X	
	Get environment metadata by ID	X	
	Get environment metadata by ID and settings	X	
	Get environment custom settings metadata by ID and environment metadata ID	X	
	Listed environment summary information	X	
	Get space environment summary	X	
	Get environment summary info by space ID	X	
	List environments summary data for space	X	
	List environments summary by space identifier v2	X	
	List all singly scoped variable details by environment ID	X	

	List environment scoped variable sets details	X	
	List singly scoped variable details by environment	X	
	Get all environments sorted by sort order in space	X	
	Get static, parent, and ephemeral environments sorted by sort order	X	
	Update environment details		X
	Modify environment details for a space		X
	Modify environment configuration		X
	List machines by filters in environment	X	
	List machines in environment by filters	X	
	Get machines by filters	X	
	Sort environments by specified order using IDs		X
	Sorts environments by specified order of ids		X
Environments	Sorts environments based on array order specified in the request body		X
	Create ephemeral environment in space for project		X
	Create ephemeral environment in space project		X
	Mark successful failed deprovisioning ephemeral environment		X
	Mark success deprovisioning ephemeral environment		X
	Mark successful provisioning for ephemeral environment		X
	Mark successful provisioning for ephemeral environment by ID		X
	Retry deprovisioning of ephemeral environment		X
	Retry deprovisioning ephemeral environment		X
	Retry ephemeral environment provisioning		X
	Retry provisioning ephemeral environment		X
	Deprovision ephemeral environment for project endpoints		X
	Deprovision ephemeral environment for project by ID in spaces projects environments ephemeral deprovision		X
	Deprovision ephemeral environment by ID		X
	Ephemeral environment deprovisioning		X
Ephemeral environments	Get ephemeral environment status by ID and space ID	X	
	Get ephemeral environment status by ID details	X	
	Delete archived event file by filename		X
	Delete archived event file by file name		X
	Download an archived event file	X	
	Get archive event files list	X	
Event retention	Get archived event files list	X	
	Get a list of events	X	
	Get a list of events by space ID	X	
	Get a list of events by space identifier ID	X	
	Get event by ID details	X	
	Get event by ID for space and ID	X	
	Get single event by ID	X	

	Get event categories lists	X	
	Get event categories by space ID	X	
	List event categories of space	X	
	Get list of subscription event document types	X	
	Get lists subscription event document types data	X	
	Get lists subscription event document types endpoint	X	
	Get lists subscription event groups details	X	
	List subscription event groups by space ID	X	
	Get subscription event groups by space identifier	X	
	Get event agents list from the events endpoint	X	
	Get event agents list by space	X	
Events	Get event agents list	X	
External security group providers	Lists the authentication providers that support external group lookups and are currently enabled	X	
	Get features configuration	X	
Features configuration	Update features configuration		X
	Create feed entry		X
	Create a feed for space		X
	Create feed in space		X
	Delete feed by ID		X
	Delete feed by ID in space		X
	Delete feed in space by ID		X
	Get feed by ID detail	X	
	Get feed resource by ID	X	
	Get feed resource by ID in space	X	
	Get a list of feeds	X	
	Get a list of feeds by space ID	X	
	Get a list of feeds by space identifier ID	X	
	Retrieve feed stats all	X	
	Get space feed statistics	X	
	Get feed statistics by space identifier	X	
	Fetch all available feeds	X	
	Get all feeds by space ID	X	
	Fetch all space feeds	X	
	Get package versions by feed and package ID	X	
	Get available package versions for feed and package	X	
	Package versions list for feed and package	X	
	Update feed by ID identifier		X
	Update feed by ID details		X
	Update feed details by ID for spaces and feeds		X
	Searches packages in feed based on search term	X	

Feeds	Searches ID packages based on search term	X		
	Searches packages in specified feed by term	X		
Github	Authorize the current user with the Octopus github app	X		
	Create github app connection for installation by space ID		X	
	Create github app connection for installation at space identifier		X	
	Deauthorize the github app for the current user, removing this users github tokens from Octopus		X	
	Exchange a github app authorization code for an access token and store in the instance	X		
	Get a list of installations by space ID	X		
	Get a list of installations by space identifier ID	X		
	Get github app connection by ID in space	X		
	Get connection details by ID in space github	X		
	Get space github connections	X		
	Fetch github app connections for space	X		
	Get status of the users current authorization	X		
	Get installation repositories by ID and installation ID	X		
	Get repositories for installation by ID	X		
	Get github repositories for connection by ID	X		
	Get connection github repositories by space identifier and connection ID	X		
	Get the installation URL for the github app	X		
	Refresh github app connection token for space ID refresh		X	
	Refresh github app connection token by ID		X	
	Refresh the github current app user refreshing the users token and cached github account details		X	
	Reset the github app registration for this Octopus instance		X	
	Response from github after an application has been installed or updated	X		
	Search account repositories by user ID	X		
	Search account's repositories by space identifier	X		
	Test connectivity to github using the provided credentials		X	
	Update github app connection repositories details		X	
	Update github app connection repositories configuration		X	
	Delete github connection by ID in space		X	
	Delete github app connection by ID in space identifier		X	
	Home	Returns a document describing the current Octopus server and links to other parts of the API	X	
		Returns a document describing the specified space and links to other parts of the API that apply to the space	X	
	Icons	Get all icon categories and icon IDs contained in each category	X	
Get details of all icons		X		
Update project logo icon			X	
Update project logo icon			X	
Modifies the logo of a space to be a specified icon			X	
Modify tenant logo icon for specified tenant			X	
Modify tenant logo icon symbol			X	

Create insights report in space		X
Create space insights report v1		X
Create insights report for space identifier by ID		X
Create insights report by space identifier (v1)		X
Delete insights report by ID from space ID		X
Delete insights report by ID v1		X
Delete insights report by ID in space by ID		X
Delete insights report by ID v1 endpoint		X
Get insights logo	X	
Get insights of reports of a space	X	
Get insights of reports using space identifier and report ID	X	
Get insights of reports	X	
Get insights of reports of spaces	X	
Get insights of reports in spaces (v1)	X	
Get insights of reports using space identifier and report ID	X	
Get a list of reports by space ID	X	
Get a list of reports by space identifier ID	X	
Get insights deployments by project ID	X	
Get insights deployments csv for project	X	
Get project insights deployments for a specific project	X	
Get csv insights deployments for a project	X	
Get insights metrics for report with space ID and report id	X	
Get series insights metrics report v1	X	
Get insights metrics for report in space	X	
Get insights metrics series for report v1	X	
Get project insights metrics	X	
Get insights metrics series for the project by project ID	X	
Get insights metrics series for the project data by ID	X	
Get project insights metrics series for the project ID	X	
Update insights report logo icon by ID		X
Update report logo icon		X
Update insights report logo icon properties		X
Modify insights report logo icon v1 for specific insight report ID in space		X
Get report deployment details by ID	X	
Get deployments status csv	X	
Retrieve report deployments by ID for a specific report	X	
Get report deployments csv files	X	
Update insights report details by ID		X
Update insights report details v1		X
Update insights report by identifier		X

	Update insights report specific v1		X
Insights	Update report logo by ID for a specific space and report		X
	Update report logo by ID in space insight report		X
	Get integrated challenge	X	
Integrated authentication	Take responsibility for interruption by user in responsible team		X
	Take responsibility for interruption by responsible team member		X
	Take responsibility for interruption by responsible team		X
	Get interruption by identifier	X	
	Get interruption by identifier spaceid and ID	X	
	Get interruption by ID in space	X	
	Get interruption responsible user	X	
	Get interruption responsible user by ID	X	
	Get responsible user for interruption by ID	X	
	Get user interruptions sorted by date	X	
	Get user attention interruptions by date	X	
	Get user attention interruptions in desc order by date	X	
Interruptions	Submit interruption form values for responsibility		X
	Submit interruption form submission		X
	Submit interruption form values for submission		X
	Create invitation for new user in a space		X
Invitations	Create invitation for new user to join space		X
	Create invitation for user joining Octopus instance		X
	Get invitation by ID from space users invitations	X	
	Retrieve invitation by ID	X	
	Get invitation by ID for user	X	
	Jira integration	Jira integration connectivity check Connect app	
	Jira integration connectivity check jira		X
JSON web keys	Gets signing keys used by Octopus server in JWK format	X	
LDAP	Search for LDAP groups	X	
	Search for LDAP users	X	
Let's encrypt	Allows you to disable the let's encrypt configuration for this Octopus server		X
Let's encrypt	Requests the current let's encrypt configuration	X	
	Create library variable set for library variable sets		X
	Create library variable set in a space		X
	Create library variable set in space		X
	Delete library variable set by ID endpoint		X
	Delete library variable set by ID in space identifier		X
	Delete library variable set by ID in space		X
	Retrieve library variable set by ID	X	
	Get library variable set by ID	X	

	Get library variable set by ID details	X	
	Get a list of all library variable sets	X	
	Get list of v1 library variable sets all	X	
	Get a list of all library variable sets by space ID	X	
	Get list of v1 library variable sets by space ID	X	
	Get a list of all library variable sets by space identifier ID	X	
	Get v1 library variable sets by space identifier ID	X	
	Get library variable sets all v1 list		X
	Get space ID library variable sets all v1 by space ID		X
	Get list by space identifier ID all library variable sets v1		X
	List library variable sets by name in space	X	
	List library variable sets by space ID	X	
	List library variable sets by space identifier	X	
	List projects and deployments using library variable set id	X	
	Get usages of library variable set	X	
	Get projects and deployments using library variable set	X	
	Update library variable set by ID		X
	Update library variable set in space by ID		X
Library variable sets	Modify library variable set for space		X
	Get the status of the current Octopus license	X	
	Get the usage of the current Octopus server	X	
	Returns a list of enabled features from the license	X	
	Returns the details of the current license in use by the Octopus cluster	X	
Licenses	Update the current Octopus cluster license		X
	Get lifecycles list	X	
	Get paginated lifecycles in space	X	
	Get lifecycles for space by ID	X	
	Create lifecycle creation process		X
	Create lifecycle by space ID		X
	Create lifecycle for space		X
	Delete lifecycle endpoint by ID		X
	Delete lifecycle by ID in space		X
	Delete lifecycle by ID for a space		X
	Get a list of previews	X	
	Get a list of previews by space ID	X	
	Get a list of previews by space identifier ID	X	
	Retrieve lifecycle preview for specified ID	X	
	Get lifecycle preview data by ID: by space ID and lifecycle ID	X	
	Get lifecycle preview details by ID and space identifier	X	
	Get lifecycle by ID	X	

Lifecycles	Get lifecycle by ID in space	X	
	Get specific lifecycle by ID in space	X	
	Get lifecycle projects by ID	X	
	Get projects by lifecycle ID	X	
	Get projects using lifecycle from lifecycle identifier	X	
	Get all lifecycles in Octopus deploy space	X	
	List lifecycles by Octopus space	X	
	Get all lifecycles by space identifier	X	
	Update lifecycle by ID		X
	Update lifecycle details		X
	Update lifecycle for space		X
	Create new machine policy for policy materialization		X
	Create machine policy by space ID		X
	Create machine policy in space		X
	Remove machine policy by ID		X
	Delete machine policy by ID v1		X
	Delete machine policy by ID for space machine policies ID		X
	Delete specified machine policy v1		X
	Delete machine policy by ID in space		X
	Delete machine policy by ID for space identifier v1		X
	Get a list of all machine policies	X	
	Get a list of all machine policies by space ID	X	
	Get a list of all machine policies by space identifier ID	X	
	Fetch machine policy by ID	X	
	Get machine policy details by ID	X	
	Get machine policy by ID from space	X	
	Get machine policies paginated list	X	
	Get paginated machine policies by space ID	X	
	Get list of machine policies by space ID	X	
	Get machines by machine policy ID pagination	X	
Get machines by machine policy ID in space	X		
Get paginated machines by machine policy ID	X		
Get machine policy workers list	X		
Get paginated workers by machine policy	X		
List workers by policy ID in space	X		
Get machine policy template details	X		
Get new machine policy template by space ID	X		
Get machine policy template by space identifier	X		
Update machine policy by ID		X	
Modify machine policy by ID in space		X	

Machine policies	Update machine policy settings		X
Machine roles	Get all machine roles data	X	
	Get all machine roles by installation	X	
	Get all machine roles for space ID	X	
	Get all machine roles by space ID	X	
	Get all machine roles in space by identifier	X	
	Get all machine roles for space identifier v1	X	
Machines	Get network connection status by ID	X	
	Get network connection status between Octopus server and machine	X	
	Get connection status of machine	X	
Maintenance configuration	Gets information about the maintenance configuration in use by the Octopus server	X	
	Update maintenance configuration Octopus server configuration maintenance endpoint		X
Migrations	Update Octopus server maintenance configuration v1		X
	Creates and queues a migration import task, from an export created via the migration partial-export API		X
Nuget	Creates and queues a partial-export migration task		X
	Push nuget packages to Octopus endpoint		X
	Push nuget packages to endpoint		X
	Start sending events for resource sessions		X
	Request kubernetes monitor events for specified resource		X
	Start logs for container session by space ID		X
	Start logs session for container in space		X
	Delete kubernetes monitor by ID in observability		X
	Delete kubernetes monitor by ID from space observe and ID		X
	Get kubernetes monitor by ID for specific space	X	
	Get kubernetes monitor by ID for space and monitor ID	X	
	Get kubernetes resource summary by ID	X	
	Get kubernetes resource summary by resource ID	X	
	Get live kubernetes resource summary by ID	X	
	Get kubernetes resource summary data by identifier	X	
	Register and trusts new kubernetes monitor by space ID observability agents		X
	Register and trust monitoring function for kubernetes monitor		X
	Register and trust new kubernetes monitor for space observability agents		X
	Register and trust kubernetes monitor in space		X
	Get kubernetes resource manifest for specified live machine	X	
	Get kubernetes resource manifest configuration	X	
	Get manifest for kubernetes resource by ID	X	
	Get kubernetes resource manifest for live resource	X	
	Get project environment tenant live status by ID	X	
	Get livestatus of project environment tenant	X	
	Get live status for a project environment tenant	X	

Observability	Get project environment tenant live status retrieve	X	
	Fetch all events for specified session from observability	X	
	Fetch all events for session by session identifier	X	
	Get session logs by ID	X	
	Fetch logs by session identifier	X	
Octopus server nodes	Deletes an existing Octopus server node		X
	Get a list of Octopus server nodes	X	
	Get all Octopus server nodes	X	
	Get an Octopus server node by ID	X	
	Modify an existing Octopus server node resource by ID		X
	Pings an Octopus server node	X	
	Returns a count of the running tasks on an Octopus server node	X	
Openid connect	Returns all Octopus server nodes in the cluster including their status information	X	
	Get users authenticated token from Azure ad	X	
	Get users authenticated token generic OIDC attribute information	X	
	Get users' authenticated token for google apps	X	
	Get Octopus ID by authenticated token	X	
	Get users authenticated token Okta by users authenticated token Okta	X	
	Users authenticate Azure ad		X
	Users authenticate generic OIDC		X
	Users authenticate google apps		X
	Users authenticate Octopus ID		X
	Users authenticate Okta		X
	Get users authenticated token Azure ad from Azuread users authentication token		X
	Retrieve users authenticated token for generic OIDC authentication		X
	Get users authenticated token for google apps retrieve		X
	Get users authenticated token Octopus ID details		X
	Get users authenticated token Okta details		X
	Gets openid connect configuration	X	
	Bulk package deletion		X
	Bulk package deletion operation		X
	Remove packages in bulk in space		X
Delete packages in bulk		X	
Delete bulk packages in space		X	
Delete packages in bulk by space identifier		X	
Delete package by ID		X	
Delete package by ID v1		X	
Delete package specification		X	
Delete specified package in space packages v1		X	
Delete package by identifier in space		X	

	Delete package by ID in space v1		X
	Download package from feed by ID and retrieve raw data	X	
	Download package from built in feed	X	
	Download package raw data from built in feed	X	
	Get packages details	X	
	Fetch built in packages list	X	
	Fetch space packages list	X	
	Get package release notes by feed ID	X	
	Get release notes for package by feed ID	X	
	Get package notes for specified feed entity	X	
	Get packages by feed id	X	
	Search packages by search criteria in feed of a space	X	
	Get packages by search criteria for space and feed ID	X	
	Get release notes for packages	X	
	Get release notes for packages by space ID	X	
	Get release notes for packages in space	X	
	Retrieve package version delta signature	X	
	Get delta signature details for package version	X	
	Get package delta signature	X	
	Fetch package information by ID	X	
	Get package details by ID	X	
	Get package information by ID in space	X	
	Uploads a delta patch for package file version delta		X
	Uploads a delta patch for file optimization		X
	Uploads delta patch for file		X
	Uploads a package to the built in package feed via raw package upload		X
	Uploads package to package feed raw		X
Packages	Uploads package to package feed raw space identifier packages		X
	Create parent environment by space ID		X
	Create parent environment in space		X
	Delete parent environment by ID		X
	Delete parent environment by ID in space		X
	Get specific parent environment by ID in space by ID and space ID	X	
	Get specific parent environment by ID in space and identifier	X	
	Update parent environment by ID		X
Parent environments	Update parent environment of space		X
	Requests the current performance configuration	X	
Performance	Sets the performance configuration		X
Permissions	Gets all the available permissions and their descriptions and restrictions	X	
	Command to update the platform hub's existing version control settings configuration		X

	Create a branch given the base git ref, and the new branch's name		X
	Create a new platform hub account		X
	Create a new platform hub git credential		X
	Delete an existing platform hub account		X
	Delete an existing platform hub git credential		X
	Get platform hub version control settings configuration	X	
	Gets a paginated list of process templates from the specified git reference (sorted by name)	X	
	Gets a specific platform hub account	X	
	Gets a specific platform hub git credential	X	
	Gets platform hub accounts	X	
	Gets platform hub git credentials	X	
	Modify an existing platform hub account		X
	Modify an existing platform hub git credential		X
	Requests a list of git tags for the platform hub	X	
Platform hub	Requests the list of branches for the platform hub	X	
	Command to share new process template to spaces		X
	Create a new process template in the provided source		X
	Creates a process template version		X
	Deletes an existing process template		X
	Get a single process template by slug	X	
	Get all the available variable names for a process template	X	
	Get icon for process template version by mask	X	
	Get process template version icon	X	
	Gets the sharing configuration for a given process template	X	
	Lists the process template versions for a given process template	X	
	Modifies an existing process template		X
	Get process template version mask by version mask	X	
Process templates	Get process template version by version mask	X	
	Get release environment lifecycle progression by project ID	X	
	Get release progress in environment lifecycle	X	
	Get project release lifecycle progress details	X	
	Get release environment lifecycle progression status	X	
	Get release progress in environment lifecycle for project and space	X	
	Get release environment lifecycle progress by space and project ID	X	
	Get release progression status by project ID	X	
	Get release progress in environment lifecycle for project	X	
	Get release environment lifecycle progression v1	X	
	Get progress details by runbook ID	X	
	Get runbook progression status by ID	X	
	Get runbook progression details by ID and runbook ID	X	

	Get runbook progression in environment lifecycle	X	
	Get runbook progression by space and runbook ID	X	
	Get runbook progression details	X	
	Get runbook dashboard items progression data	X	
	Get runbook dashboard items by criteria and progressions	X	
Progression	Get runbook dashboard items by filters	X	
	Create project group post project groups		X
	Create project group by space ID		X
	Create project group in space		X
	Delete project group by ID		X
	Delete project group by ID in space		X
	Delete project group in space by ID		X
	Fetch project group details by identifier	X	
	Get project group by ID in space	X	
	Get project group details by ID	X	
	Get project groups pagination by name	X	
	Get paginated project groups by space ID	X	
	Get paginated project groups by space identifier	X	
	Get paginated projects by group ID	X	
	Get projects by project group ID and space ID	X	
	Get paginated list projects by project group	X	
	Get all project groups information	X	
	List project groups in given Octopus deploy space	X	
	Get all project groups in Octopus deploy space	X	
	Update project group details by ID		X
	Update project group details by ID in a space		X
Project groups	Update project group details for a specific project group		X
Project templates	Command to share new project template to spaces		X
	Create project trigger mapping		X
	Create project trigger on ui thread		X
	Create project trigger for specified project		X
	Create new project trigger by space ID		X
	Create project trigger for specific project		X
	Create project trigger for space		X
	Delete project trigger by ID by project ID		X
	Delete project trigger by ID by identifier		X
	Delete project trigger		X
	Delete project trigger by ID in space project triggers		X
	Delete project trigger by ID in space projects triggers ID		X
	Delete project trigger by ID in space		X

	Get a list of project triggers	X	
	Get a list of project triggers by space ID	X	
	Get a list of project triggers by space identifier ID	X	
	Get project trigger by ID endpoint	X	
	Get project trigger by ID from spaceid and trigger ID	X	
	Get project trigger by ID in space and with trigger ID	X	
	Get project trigger details by IDs	X	
	Fetch project trigger details by ID	X	
	Get project trigger details by ID	X	
	Get project triggers by project ID	X	
	Get project triggers data by project ID	X	
	Get project triggers in project by ID	X	
	Update project trigger by ID		X
	Update project trigger by ID by project triggers ID put		X
	Update project trigger resource by ID		X
	Update project trigger resource by ID and space ID		X
	Update project trigger by ID properties		X
Project triggers	Update project trigger by ID		X
	Migrate runbooks to git storage		X
	Converts runbooks storage to git migration		X
	Converts project configuration to version control		X
	Converts project configuration to git convert		X
	Converts project configuration to version control for a project		X
	Create project by post method		X
	Create project in space		X
	Create project in space by ID		X
	Delete project by ID using project ID		X
	Delete project by ID post relative URI space ID projects project ID		X
	Delete project by identifier		X
	Get project by ID or slug by project ID	X	
	Get project details by ID or slug	X	
	Get project by ID or slug details	X	
	Get project by ID or slug by project ID and git reference	X	
	Get project by identifier or slug	X	
	Retrieve project by ID or slug details	X	
	Get project specific information summary	X	
	Get project specific summary information	X	
	Get project specific information summary	X	
	Get project specific summary information	X	
	Get project specific information summary	X	

	Get project summary information from git ref	X	
	Get project summary by ID	X	
	Get project summary information	X	
	Get project information summary by git reference	X	
	Get project specific information summary v1	X	
	Get project summary details	X	
	Get project summary information by identifiers v1	X	
	Get metadata by project ID	X	
	Get custom settings metadata from extensions by project	X	
	Get project metadata by ID and space identifier	X	
	Fetch project logo by ID	X	
	Get project logo by ID for space ID and project ID	X	
	Get project logo by ID for project	X	
	List projects in space	X	
	Get all projects in space by ID	X	
	List projects in space by space identifier	X	
	Get all projects in Octopus deploy space	X	
	Get all projects in Octopus deploy space	X	
	List projects in space	X	
	Update project details		X
	Update project details by project ID		X
	Update project details in space		X
	Test git connectivity for project		X
	Git connectivity test endpoint		X
	Test git connectivity for project		X
	Update project logo by identifier		X
	Update project logo endpoint		X
	Update project logo by ID		X
	Update project logo by ID for project specific logo upload		X
	Update project logo by ID for space and project logo URI		X
	Update project logo by project ID		X
	Validate git ref for project		X
	Validate git ref for project		X
	Validate git reference for project		X
Projects	Create proxy in space by ID		X
	Create proxy for space by space ID		X
	Create space proxy		X
	Delete proxy by ID		X
	Delete proxy by ID for space		X
	Delete proxy by ID of space		X

Proxies	Get a list of proxies	X	
	Get a list of all proxies	X	
	Get a list of proxies by space ID	X	
	Get a list of all proxies by space ID	X	
	Get a list of proxies by space identifier ID	X	
	Get a list of all proxies by space identifier ID	X	
	Get proxy by ID details	X	
	Fetch a proxy based on ID	X	
	Get proxy by ID in space	X	
	Update proxy in specified space with ID		X
	Update proxy in space		X
	Update proxy in space		X
	Create release details		X
	Create release in space		X
	Create a space release		X
	Create release record v1		X
	Create release version v1 in space ID		X
	Create release in space by identifier v1		X
	Delete release resources by ID		X
	Delete release by ID and space		X
	Delete release by ID		X
	Get a list of releases	X	
	Get a list of releases by space ID	X	
	Get a list of releases by space identifier ID	X	
	Get a list of variables	X	
	Get a list of variables by space ID	X	
	Get a list of variables by space identifier ID	X	
	Get release by ID data	X	
	Fetch a release by ID from space ID	X	
	Get release by ID in space	X	
	Get deployment preview description by environment	X	
	Get deployment preview information	X	
	Get deployment preview information	X	
Get deployment steps preview by environment and tenant	X		
Get deployment preview description	X		
Get deployment preview steps document by environment and tenant	X		
Fetch release details by project ID and version	X		
Get release by project ID and version number	X		
Get release by project ID and version	X		
Get all defects by release ID	X		

	Get release defects by release ID	X	
	Get release defects by ID	X	
	Get release deployment template data	X	
	Get release deployment information	X	
	Get release deployment template metadata	X	
	Get release deployment information	X	
	Get deployment creation information template	X	
	Get release deployment progress information	X	
	Fetch missing packages for release	X	
	Get release missing packages details	X	
	List deployments for release	X	
	List deployments for release	X	
	List deployments by release ID	X	
	List channel releases by ID	X	
	List channel releases by ID's channel ID	X	
	List channel releases by ID	X	
	List releases by channel id	X	
	List releases by channel ID for space	X	
	List channel releases by channel identifier	X	
	Get project releases for given project ID	X	
	Get project releases by space ID and project ID	X	
	Get project releases by ID	X	
	Add defect to release by ID		X
	Add defect in a release record		X
	Add defect to release		X
	Resolve defect in release by ID relative URI defects resolve by release ID		X
	Resolve defect in release by ID post solution		X
	Resolve defect in release with resolution by ID		X
	Get deployment previews documents by release ID		X
	Get deployment preview documents by release ID		X
	Get deployment preview status by release ID and environment ID		X
	Update release data by ID		X
	Update release details by ID		X
	Update release by identifier and ID		X
	Update release snapshot variable by ID		X
	Update release snapshot variables for a specific release		X
	Update release snapshot variables		X
Releases	Get xml report deployments reporting deployments xml	X	
	Get xml report of deployments by space ID	X	
	Get xml deployment report for space	X	

Reporting	Get weekly deployments summary by project	X	
	Get weekly deployments counted by week summary	X	
	Get project deployments counted by week	X	
Retention	Get retention policies by retention type ID	X	
	Get default retention policies by type id	X	
	Get default retention policies by retention type for space	X	
	Get the default retention configuration	X	
	Update retention policy by ID		X
	Update retention policy for a space		X
	Update retention policy configuration for a space		X
	Updates the default retention configuration		X
	Get runbook processes for project	X	
	Fetch runbook processes list	X	
Get runbook processes by project ID and space ID	X		
Get list of runbook processes by space ID	X		
Get runbook processes for project in space by identifier	X		
Get runbook processes by space ID	X		
Get runbook process details by ID	X		
Fetch runbook process by ID from project	X		
Get runbook process detail by ID	X		
Get runbook process by ID in project git ref	X		
Get runbook process by ID in project	X		
Get runbook process by ID in space	X		
Fetch runbook process by ID	X		
Get runbook process by ID in project by space identifier	X		
Fetch runbook process details by ID	X		
Get runbook snapshot template details for runbook process	X		
Get runbook snapshot template for runbook process	X		
Get runbook snapshot template info by IDs	X		
Get runbook snapshot template by runbook process ID	X		
Get runbook snapshot template details	X		
Get runbook snapshot template by process ID	X		
Update runbook process by ID in project and git ref		X	
Modify runbook process details		X	
Update runbook process by ID details		X	
Update runbook process by ID in project git ref		X	
Modify runbook process by ID		X	
Update runbook process by ID in space		X	
Update runbook process in project by git reference		X	
Modify runbook process details		X	

Runbook processes	Update runbook process parameters		X
	Create a new runbook run retry		X
	Create retry for runbook run by ID		X
	Retry runbook run based on existing runbook run		X
	Create new runbook run v1 endpoint		X
	Create runbook run v1 by space ID		X
	Create new runbook run for space endpoint		X
	Create runbook run for project gitref and runbook ID		X
	Create runbook run in project		X
	Create a runbook run action		X
	Create runbook run v1 for project		X
	Create runbook run in project runbook runs		X
	Create new runbook run in space endpoint		X
	Create runbook run v1 details		X
	Create runbook run project runbook run		X
	Create runbook run in space		X
	Delete runbook run by ID using project ID and runbook run ID		X
	Delete runbook run by ID resource URI runbook runs ID		X
	Delete runbook run by ID with space ID projects ID and ID		X
	Delete runbook run by ID in space by ID		X
	Delete runbook run by ID in project of a space		X
	Delete runbook run details		X
