

Resource	API endpoint	Export	Import
Absence management v1: Balances	Retrieve the specified balance of all absence plan and leave of absence types	X	
	Retrieve the balance of all absence plan and leave of absence type for the specified worker ID	X	
Absence management v1: Prompt values	Retrieve parameter values for leave status in the absence management service.	X	
	Retrieve parameter values for time off status in the absence management service.	X	
Absence management v1: Workers	Retrieve the leave of absence for the specified worker	X	
	Retrieve a collection of eligible absence types for the specified worker	X	
	Retrieve the leaves of absence for a specified worker ID	X	
	Create a time off request for the specified worker ID and initiate the business process		X
	Retrieve the valid time off dates for the specified worker	X	
	Retrieve a collection of workers and current staffing information	X	
	Retrieve a collection of time off details for the specified worker	X	
	Retrieve the valid time off dates for the specified worker ID for the given dates	X	
	Retrieve the eligible absence type for the specified worker	X	
Absence management v5: Balances	Retrieves the balance of all absence plan and leave of absence type for the specified worker ID	X	
	Retrieves the specified balance of all absence plan and leave of absence types	X	
Absence management v5: Prompt values	The status of the event that tracks the requested time off	X	
	The possible statuses for a worker's time off entry request event	X	
	Retrieves a collection of workers and current staffing information	X	
	Creates a time off correction for the specified worker ID and initiates the business process		X
	Retrieves a collection of eligible absence types for the specified worker	X	
	Retrieves the eligible absence type for the specified worker	X	
	Retrieves the leaves of absence for a specified worker ID	X	
	Retrieves the leave of absence for the specified worker	X	

Resource	API endpoint	Export	Import
Absence management v5: Workers	Creates a time off request for the specified worker ID and initiates the business process		X
	Retrieves a collection of time off details for a specified worker	X	
	Retrieves details of a specified time off entry for a specified worker	X	
	Retrieves the valid time off dates for the specified worker ID for the given dates	X	
Accounts payable v1: Send supplierinvoiceattachmentsfor	Send supplier invoice attachments for scanning		X
Accounts payable v1: Supplier invoicerequests	Submit a single supplier invoice instance		X
	Supplier invoice request — supplier invoice request (Supplier accounts — attachments)	X	
	Retrieve a collection of supplier invoices	X	
	Create the supplier invoice as specified in the request		X
	Retrieve a single attachment instance	X	
	Retrieve a collection of supplier invoice lines	X	
	Retrieve a single supplier invoice instance	X	
	Retrieve a collection of attachments for the specified supplier invoice	X	
	Create a new attachment for the supplier invoice		X
	Retrieve a single supplier invoice line instance	X	
Asor v1: Agent definition	Retrieves agent definitions	X	
	Creates or updates an agent definition		X
	Retrieves agent registrations	X	
	Retrieves an agent registration by ID	X	
Benefit enrollment event offerings v1: Employee enrollment	Retrieves the latest benefit enrollment event of the processing worker	X	
	Retrieves the latest benefit enrollment event of the processing worker by ID	X	
Benefit partner v1: Programs	Create a single benefit program instance		X
Budgets v1: Run budgetcheck	Create a budget check for transactions		X
	Post an action for a to do step in a business process		X
	Retrieve business process event steps	X	
	Retrieve a business process event step	X	

Resource	API endpoint	Export	Import
Business process v1: Event steps	Deny a business process event step		X
	Post an action for a complete questionnaire step in a business process		X
	Approve a business process event step		X
	Send back a business process event step		X
	Reassign a business process event step		X
Business process v1: Events	Retrieves business process events	X	
	Retrieve completed steps for a business process event	X	
	Retrieve attachments for a business process event	X	
	Retrieve comments for a business process event	X	
	Retrieve in progress steps for a business process event	X	
	Retrieve remaining steps for a business process event	X	
	Retrieve a business process event	X	
Business process v1: Prompt values	Retrieve parameter values for send back to in the business process service.	X	
Business process v1: Types	Retrieve all business process types	X	
	Retrieve a business process type	X	
	Retrieve attachment categories for a business process type	X	
Common v1: Audit logs	Retrieve an audit log instance	X	
	Retrieve a collection of audit logs	X	
Common v1: Business titlechanges	Retrieve a business title change instance	X	
	Retrieve a currency instance	X	
	Retrieve a collection of currencies	X	
	Retrieve a customer instance	X	
	Retrieve an activity instance for a specific customer	X	
	Retrieve a collection of activities for a specific customer	X	
Common v1: Job changereasons	Retrieve a collection of job change reasons	X	
	Retrieve a job change reason instance	X	
Common v1: Organization types	Retrieve a collection of organization types	X	
	Retrieve an organization type instance	X	

Resource	API endpoint	Export	Import
	Retrieve a collection of organizations	X	
	Retrieve an organization instance	X	
Common v1: Supervisory organizations	Retrieve a collection of supervisory organizations	X	
	Retrieve a supervisory organization instance	X	
	Retrieve a worker instance for a specific supervisory organization	X	
	Retrieve a collection of workers for a specific supervisory organization	X	
Common v1: Validate worktags	Validate the allowed and required worktag types and working combinations		X
	Retrieve a particular time off plan for a specific worker	X	
	Retrieve a business title change instance for a specific worker	X	
	Change my business title (Staffing)		X
	Retrieve a collection of inbox tasks for a specific worker	X	
	Retrieve an organization instance for a specific worker	X	
	Retrieve a collection of history items for a specific worker	X	
	Retrieve a collection of workers	X	
	Retrieve a history instance for a specific worker	X	
	Retrieve a collection of organizations for a specific worker	X	
	Retrieve a collection of supervisory organizations managed by a specific worker	X	
	Retrieve a time off entry for a specific worker	X	
	Create a job change instance with the specified data		X
	Retrieve a collection of pay slips for a specific worker	X	
	Retrieve a collection of direct reports for a specific worker	X	
	Retrieve a pay slip instance for a specific worker	X	
	Retrieve an inbox task instance for a specific worker	X	
	Retrieve a direct report instance for a specific worker	X	
	Retrieve a collection of time off plans for a specific worker	X	
	Retrieve a collection of business title changes for a specific worker	X	
	Create a business title change instance with the specified data		X
Retrieve a worker instance	X		

Resource	API endpoint	Export	Import
	Retrieve a supervisory organization managed by a specific worker	X	
	Retrieve a collection of time off entries for a specific worker	X	
	Provides the ability to set up and retrieve scores on scorecard results	X	
Compensation v2: Scorecard results	Create a new scorecard result		X
	Delete the scorecard results with the specified ID		X
	Update the score for the specified scorecard result		X
	Retrieve compensation scorecard information	X	
	Create a compensation scorecard		X
	Update a compensation scorecard		X
	Delete a compensation scorecard with the specified ID		X
	Retrieve a worker instance	X	
	Retrieve a collection of workers	X	
	Request a one time payment for a worker with the specified ID		X
Compensation v3: Prompt values	Retrieves instances that can be used as values for other endpoint parameters in this service	X	
	Provides the ability to set up and retrieve scores on scorecard results	X	
Compensation v3: Scorecard results	Creates a new scorecard result		X
	Deletes the scorecard results with the specified ID		X
	Updates the score for the specified scorecard result		X
	Retrieves compensation scorecard information	X	
	Creates a compensation scorecard		X
	Updates a compensation scorecard		X
	Deletes a compensation scorecard with the specified ID		X
	Retrieves a collection of workers	X	
	Retrieves a worker instance	X	
	Request a one-time payment for a worker with the specified ID		X
	Retrieve a message template with the specific ID	X	
	Update an existing message template instance		X
	Partially updates an existing message template instance		X

Resource	API endpoint	Export	Import
Connect v2: Message templates	Retrieve a collection of message templates	X	
	Set up message templates (Learning core system)		X
Connect v2: Notification types	Retrieve a collection of notification types	X	
	Retrieve a notification type	X	
Connect v2: Send message	Administer communications (System)		X
Contract compliance v1: Prompt values	Retrieve all companies or company hierarchies the user has access to	X	
	Retrieve all contract types the user has access to	X	
Contract compliance v1: Supplier contracts	Retrieve all supplier contracts	X	
	Retrieve a supplier contract	X	
Core accounting v1: Currencies	Retrieve the details on all currencies in your tenant	X	
	Retrieve the details of a specified currency	X	
Core accounting v1: Evaluate accountpostingrules	Retrieve the ledger account and resulting worktags of a specified account posting rule	X	
	Update cube sheet definition		X
	Delete cube sheet definition		X
	Retrieve a collection of validations in a custom object definition	X	
	Custom object management (System)		X
	Retrieve a validation in a custom object definition	X	
	Update an existing validation in a custom object definition		X
	Delete a validation in a custom object definition		X
	Retrieve a custom object definition	X	
	Update an existing custom object definition		X
	Delete a custom object definition		X
	Retrieve a collection of custom object definitions	X	
	Retrieve a collection of condition rules in a custom object definition	X	
	Retrieve a condition rule in a custom object definition	X	
	Update an existing condition rule in a custom object definition		X
	Delete a condition rule in a custom object definition		X
	Retrieve a field in a custom object definition	X	

Resource	API endpoint	Export	Import
Custom objectdefinition v1: Definitions	Update an existing field in a custom object definition		X
	Delete a field in a custom object definition		X
	Retrieve a collection of fields in a custom object definition	X	
Custom objectdefinition v1: Field types	Retrieve a collection of custom field types	X	
	Custom object management (System)		X
	Retrieve a list value for a custom lists in a custom object definition	X	
	Update an existing list value in a custom object definition		X
	Retrieve a custom field type	X	
	Update an existing custom field type		X
	Retrieve a collection of list values for a custom list in a custom object definition	X	
Custom object v2: Custom objects	Retrieve a collection of multi instance custom objects	X	
	Create instances of multi instance custom objects		X
	Get a specific instance of a multi instance custom object	X	
	Update an instance of a multi instance custom object		X
	Delete an instance of a custom object		X
	Create a new or update an existing instance of a custom object		X
	Retrieve a custom object instance	X	
	Update a custom object instance		X
	Delete a custom object instance		X
Customer accounts v1: Customers	Retrieve a single customer instance	X	
	Retrieve a collection of customers	X	
Customer accounts v1: Invoice pdfs	Retrieve a single customer invoice PDF instance	X	
Customer accounts v1: Invoices	Retrieve a single customer invoice or adjustment instance	X	
	Retrieve a collection of customer invoices and adjustments	X	
	Retrieve a single customer invoice print run	X	
	Retrieve a collection of customer invoice print runs for the specified customer invoice or adjustment	X	
	Retrieve a single customer invoice payment remittance line instance	X	

Resource	API endpoint	Export	Import
Customer accounts v1: Payments	Retrieve a single customer invoice payment instance	X	
	Create customer invoice payments		X
	Create customer invoice payment remittance lines		X
	Fetch exchange rate types	X	
	Exchange rate types		X
	Delete exchange rate type		X
	Retrieve a single instance of a quick expense	X	
	Update an existing quick expense instance		X
	Self service expense report (Expenses)		X
	Self service expense report (Expenses — attachments)		X
	Retrieve a collection of quick expenses	X	
	Create new attachments for the existing expense entry		X
Expense v1: Expense items	Retrieve a single instance of an expense item	X	
	Retrieve a collection of expense items	X	
	Retrieve a single instance of an expense report	X	
	Retrieve a collection of expense reports	X	
	Self service expense report (Expenses)		X
	Create a collection of expense report lines		X
	Submit expense report rest API (Expenses)		X
Fin taxpublic v1: Electronic reportingruns	Enable applications to create information on electronic reporting of customer and supplier invoice documents		X
Global payroll v1: Event drivenintegrationvendorresponse	Update a specific vendor response instance of event driven integration		X
	Retrieve a single event driven integration vendor response	X	
Global payroll v1: Pay groups	Retrieve a payroll interface pay group	X	
	Retrieve a collection of payroll periods for the specified payroll interface pay group ID	X	
	Retrieve a payroll period for the specified payroll interface pay group ID	X	
	Partially updates an existing pay period by the specified pay group ID		X
	Retrieve a collection of payroll interface pay groups	X	

Resource	API endpoint	Export	Import
Help article v1: Article statuses	Retrieve a list of article version statuses for all articles	X	
	Retrieve an article version status for an article	X	
Help article v1: Article versions	Retrieve an article version and the plain text content for the article version	X	
	Retrieve a list of article versions and the plain text content within each article version	X	
Help case v3: Attachments	Upload an attachment when creating a case		X
	Return attachments	X	
Help case v3: Case suggestions	Retrieve a list of suggestions based on case type	X	
	Retrieve a list of suggestions based on case type.	X	
Help case v3: Case types	Retrieve a list of case types that a worker has access to	X	
Help case v3: Cases	Retrieve a list of cases that the user is secured to view	X	
	Create a case		X
	Retrieve a list of comment timeline items for a case	X	
	Help cases tg self service help case management TG (Help)		X
	Retrieve a case with the specified ID that the user is secured to view	X	
	Retrieve a comment timeline item for a case with the specified timeline ID	X	
Help case v3: Configuration	Retrieve tenant setup configurations related to help case management	X	
Help case v3: External creators	Retrieve contact details for a single external case contact instance	X	
	Retrieve a collection of external contact details	X	
	Create external case contacts		X
Help case v3: Service categories	Retrieve a service category with the specified ID	X	
	Retrieve all parent service categories	X	
Help case v4: Attachments	Uploads an attachment when creating a case		X
	Will return attachments	X	
Help case v4: Case suggestions	Retrieves a list of suggestions based on case type	X	
Help case v4: Case types	Retrieves a list of case types that a worker has access to	X	
	Retrieves a list of cases that the user is secured to view	X	
	Creates a case		X
	Retrieves a case with the specified ID that the user is secured to view	X	

Resource	API endpoint	Export	Import
	Edits a case		X
	Retrieves a list of comment timeline items for a case	X	
	Adds a comment to a case		X
	Retrieves a comment timeline item for a case with the specified comment timeline ID	X	
	Retrieves a list of internal note timeline items for a case	X	
	Creates an internal note on a case		X
	Retrieves an internal note timeline item for a case with the specified internal note timeline ID	X	
	Deletes an internal note		X
	Edits an internal note		X
	Updates an existing resolved case instance		X
Help case v4: Cases	Retrieves a comment timeline item for a case with the specified timeline ID	X	
Help case v4: Configuration	Retrieves tenant setup configurations related to help case management	X	
	Retrieves a collection of external contact details	X	
	Creates external case contacts		X
Help case v4: External creators	Retrieves contact details for a single external case contact instance	X	
	Creates and links external records to a help case		X
Help case v4: External records	Deletes an existing link instance between an external record and case		X
	Retrieves instances that can be used as values for other endpoint parameters in this service	X	
	Get all case statuses	X	
Help case v4: Prompt values	Get all sources for external records	X	
	Retrieves all parent service categories	X	
Help case v4: Service categories	Retrieves a service category with the specified ID	X	
Holiday v1: Holiday events	Retrieve holiday events	X	
	Get workers	X	
	Retrieves a collection of learning content	X	
	Retrieves a single learning content instance	X	

Resource	API endpoint	Export	Import
	Retrieves a collection of lessons for a learning content	X	
	Retrieves a single lesson for a learning content instance	X	
	Retrieves a collection of learning enrollments	X	
	Retrieves a single learning enrollment	X	
	Partially updates an existing learning enrollment		X
	Retrieves lesson tracking data for an enrollment	X	
	Creates lesson tracking instances		X
	Retrieves a single lesson tracking for an enrollment	X	
	Updates lesson tracking instances		X
Learning v1: Manage digitalcourses	Creates or updates digital courses		X
Learning v1: Manage enrollments	Creates an enrollment		X
	Retrieves prompt values for tracking enrollment attendance status	X	
	Retrieves prompt values for tracking enrollment duration unit	X	
Learning v1: Prompt values	Retrieves prompt values for tracking enrollment grade	X	
	Retrieves a collection of learning records	X	
	Retrieves a single learning record instance	X	
	Update modeled sheet definition		X
	Delete modeled sheet definition		X
	Validate modeled sheet definition		X
O authclient v1: Client details	Return a valid oauth client details for ocfr clients	X	
	Retrieve a single pay group instance	X	
	Retrieve the pay group for a specified job ID this method always return one pay group	X	
	Retrieve a collection of jobs	X	
	Retrieve a single job instance	X	
	Retrieve a single pay group detail instance	X	
Payroll v2: Pay groupdetails	Retrieve a collection of pay group details	X	
	Retrieve a single pay group instance	X	
Payroll v2: Pay groups	Retrieve a collection of pay groups	X	

Resource	API endpoint	Export	Import
Payroll v2: Payroll inputs	Retrieve a single payroll input instance	X	
	Delete an existing payroll input instance		X
	Partially updates an existing payroll input instance		X
	Retrieve a collection of payroll inputs at least one query parameter is required to get data	X	
	Create payroll inputs		X
Payroll v2: Prompt values	Retrieve parameter values for tax rates group company instances in the payroll service.	X	
	Retrieve parameter values for payroll inputs group worktags in the payroll service.	X	
	Retrieve parameter values for payroll inputs group run categories in the payroll service.	X	
	Retrieve parameter values for payroll inputs group positions in the payroll service.	X	
	Retrieve parameter values for tax rates group state instances in the payroll service.	X	
	Retrieve parameter values for payroll inputs group pay components in the payroll service.	X	
Payroll v2: Tax rates	Retrieve a single or a collection of company sui rates	X	
	Create a single or a collection of company sui rates		X
Performance enablement v4: Feedback badges	Retrieve a collection of active feedback badges	X	
	Retrieve a feedback badge with the specified ID	X	
Performance enablement v4: Prompt values	Retrieve parameter values for workers to notify workers to notify in the performance enablement service.	X	
Performance enablement v4: Workers	Retrieve a collection of workers and current staffing information	X	
	Retrieve a collection of goals for a specific worker	X	
	Retrieve a collection of feedback given events about the specified worker	X	
	Create a single feedback given event instance about the specified worker		X
	Retrieve a single goal instance for a specific worker	X	
	Retrieve a feedback given event instance with the specified ID	X	

Resource	API endpoint	Export	Import
Performance enablement v5: Cascaded goalevent	Creates and initiates a cascaded goal event		X
Performance enablement v5: Feedback badges	Retrieves a collection of active feedback badges	X	
	Retrieves a feedback badge with the specified ID	X	
Performance enablement v5: Give requestedfeedbackeve	Retrieves a collection of feedback given events about the user that responded to the feedback request	X	
	Retrieves a single requested feedback given event instance with the specified ID	X	
	Updates the existing give requested feedback event instance with the specified ID		X
Performance enablement v5: My performancereviews	Creates a single performance review instance with the specified data		X
Performance enablement v5: Organization goals	Creates an organization goal for an organization		X
	Partially updates a single organization goal instance with the specified data		X
Performance enablement v5: Prompt values	Talent pools the processing user has view and edit access for	X	
	Retrieves instances that can be used as values for other endpoint parameters in this service	X	
Performance enablement v5: Worker goalevents	Get worker goal events	X	
	Creates a worker goal event		X
	Get worker goal events by ID	X	
	Creates a single goal instance with the specified data		X
	Submits a worker goal event		X
	Retrieves a collection of workers and current staffing information	X	
	Retrieves a worker and current staffing information	X	
	Retrieves a collection of feedback given events about the specified worker	X	
	Creates a single feedback given event instance about the specified worker		X
	Retrieves a feedback given event instance with the specified ID	X	
	Retrieves a collection of development items for the specified worker	X	
	Retrieves a single development item for the specified worker	X	
	Deletes an existing development item		X
Retrieves a collection of goals for a specific worker	X		

Resource	API endpoint	Export	Import
Performance enablement v5: Workers	Retrieves a single goal instance for a specific worker	X	
	Retrieves a collection of self-requested feedback events for the specified worker	X	
	Creates a single self-requested feedback event instance for the specified worker		X
	Retrieves a single self-requested feedback event instance for the specified worker	X	
	Retrieves a collection of requested feedback events for the specified worker	X	
	Creates a single requested feedback event instance for the specified worker		X
	Retrieves a single requested feedback event instance for the specified worker	X	
	Retrieve information about a country	X	
	Retrieve the allowed address components and their configuration for the country and a given address configuration format	X	
	Retrieve a collection of configuration information about name components	X	
	Retrieve a collection of information about countries	X	
	Retrieve all existing web addresses staged for update by the parent business process	X	
	Person data home web address self service home web address (Contact information)		X
	Retrieve home contact information changes	X	
	Retrieve all existing phone numbers staged for update by the parent business process	X	
	Person data home phone self service home phone (Contact information)		X
	Retrieve all existing addresses staged for update by the parent business process	X	
	Person data home email self service home email (Contact information)		X
	Person data home address self service home address (Contact information)		X
Retrieve instant messenger as it exists staged for update by the parent business process	X		

Resource	API endpoint	Export	Import
Person v4: Home contactinformationchanges	Person data home instant messenger self service home instant messenger (Contact information)		X
	Retrieve web address as it exists staged for update by the parent business process	X	
	Retrieve phone number as it exists staged for update by the parent business process	X	
	Submit the specified contact change ID		X
	Retrieve all existing instant messengers staged for update by the parent business process	X	
	Retrieve email address as it exists staged for update by the parent business process	X	
	Retrieve address as it exists staged for update by the parent business process	X	
	Retrieve a collection of personal information	X	
	Retrieve a home address	X	
	Retrieve an additional name	X	
	Retrieve a collection of audio name pronunciations	X	
	Retrieve a person's personal information	X	
	Retrieve a collection of personal photos	X	
	Retrieve the preferred name instance	X	
	Retrieve a personal photo	X	
	Retrieve a collection of work instant messenger accounts usernames	X	
	Retrieve the legal name instance	X	
	Retrieve a collection of work email addresses	X	
	Retrieve a collection of home addresses	X	
	Retrieve a home phone number	X	
	Retrieve a work instant messenger account username	X	
	Retrieve a work address	X	
	Retrieve a collection of work phone numbers	X	
Retrieve an audio name pronunciation	X		

Resource	API endpoint	Export	Import
	Retrieve a work web address	X	
	Retrieve a person's public contact information	X	
	Retrieve a collection of home phone numbers	X	
	Retrieve a person in your workday tenant	X	
	Retrieve a collection of public contact information	X	
	Retrieve a collection of home web addresses	X	
	Retrieve a collection of additional names	X	
	Retrieve a collection of work addresses	X	
	Retrieve a collection of work web addresses	X	
	Retrieve a work phone number	X	
	Retrieve a home email address	X	
	Retrieve a home instant messenger account username	X	
	Retrieve a work email address	X	
	Retrieve a home web address	X	
	Retrieve a collection of home instant messenger account usernames	X	
	Retrieve a collection of home email addresses	X	
Person v4: Phone validation	Validates phone number data to ensure it is valid for workday		X
	Retrieve parameter values for name components hereditary in the person service.	X	
	Retrieve parameter values for name components religious in the person service.	X	
	Retrieve parameter values for name components honorary in the person service.	X	
	Retrieve parameter values for name components royal in the person service.	X	
	Retrieve parameter values for name components title in the person service.	X	
	Exposes prompting for country phone codes which are used during the collection of phone numbers	X	
	Retrieve parameter values for country components country city in the person service.	X	

Resource	API endpoint	Export	Import
Person v4: Prompt values	Retrieve parameter values for name components salutation in the person service.	X	
	The set of countries a person has populated with country specific data	X	
	Retrieve parameter values for name components social in the person service.	X	
	Retrieve parameter values for name components professional in the person service.	X	
	Retrieve parameter values for country components country in the person service.	X	
	Retrieve parameter values for name components academic in the person service.	X	
	The set of countries a person is allowed to populated with country specific data	X	
	Retrieve parameter values for country components country region in the person service.	X	
	Marital statuses that are active and configured for the country or country region	X	
	Exposes prompting for phone device types which are used during the collection of phone numbers	X	
	Retrieve phone number as it exists staged for update by the parent business process	X	
	Person data work phone self service work phone (Contact information)		X
	Retrieve instant messenger as it exists staged for update by the parent business process	X	
	Person data work instant messenger self service work instant messenger (Contact information)		X
	Submit the specified contact change ID		X
	Retrieve work contact information changes	X	
	Person data work address self service work address (Contact information)		X
	Retrieve all existing instant messengers staged for update by the parent business process	X	

Resource	API endpoint	Export	Import
Person v4: Work contactinformationchanges	Retrieve web address as it exists staged for update by the parent business process	X	
	Person data work web address self service work web address (Contact information)		X
	Retrieve all existing phone numbers staged for update by the parent business process	X	
	Retrieve all existing email addresses staged for update by the parent business process	X	
	Person data work email self service work email (Contact information)		X
	Retrieve email address as it exists staged for update by the parent business process	X	
	Retrieve all existing web addresses staged for update by the parent business process	X	
	Retrieve address as it exists staged for update by the parent business process	X	
	Retrieve all existing addresses staged for update by the parent business process	X	
Prism analytics v3: Buckets	Get the buckets permitted by the security profile of the current user	X	
	Create a new bucket for a table or dataset		X
	Get bucket by ID	X	
	Edit an existing bucket with the specified name		X
	Upload a single file to a bucket for a table or dataset		X
	Commit data contained in a bucket into the associated table or dataset		X
	Get bucket error file by ID	X	
	Get data changes accessible by a user	X	
	Gets data change associated with ID	X	
	Execute data change by ID		X
	Get details of the activity specified by activity ID	X	
	Validate data change specified by data change ID	X	
	Cancel data change specified by data change ID and activity ID		X
	Create new filecontainer		X

Resource	API endpoint	Export	Import
Prism analytics v3: Data changes	Get all files for a file container	X	
	Load file into file container		X
Prism analytics v3: Tables	Get tables that the current user has permission on	X	
	Create a new table with the specified name		X
	Get the description of a table by ID	X	
	Edit an existing table with the specified name		X
	Edit the specified attributes of an existing table with the specified ID		X
Privacy v1: Activity logging	Retrieve a collection of user activity log entries in a specified time frame	X	
	Retrieve parameter values for requisitions group resolved worktags in the procurement service.	X	
	Retrieve parameter values for requisitions group requesters in the procurement service.	X	
	Return the company reference ID response field	X	
	Retrieve parameter values for requisitions group order from connection in the procurement service.	X	
	Retrieve parameter values for requisitions group ship to address in the procurement service.	X	
	Retrieve parameter values for requisitions group resource provider in the procurement service.	X	
	Retrieve parameter values for requisitions group deliver to location in the procurement service.	X	
	Return the spend category ID response field	X	
	Retrieve parameter values for requisitions group supplier contract in the procurement service.	X	
	Return the un cefact common code response field	X	
	Retrieve parameter values for requisitions group sourcing buyer in the procurement service.	X	
	Retrieve parameter values for requisitions group inventory site in the procurement service.	X	

Resource	API endpoint	Export	Import
Procurement v4: Prompt values	Retrieve parameter values for requisitions group line company in the procurement service.	X	
	Retrieve parameter values for requisitions group currencies in the procurement service.	X

Staffing v7: Prompt values	Retrieve parameter values for job changes group job classifications in the staffing service.	X	
	Retrieve parameter values for organization assignment changes group gifts in the staffing service.	X	
Staffing v7: Supervisory organizations	Retrieve a single supervisory organization instance	X	
	Retrieve information about an organization chart of the specified supervisory organization ID	X	
	Retrieve a single member instance	X	
	Retrieve a supervisory organization for the specified ID	X	
	Retrieve a collection of members for the specified supervisory organization ID	X	
	Retrieve a single organization chart instance	X	
	Initiate an organization assignment change for a specific worker		X
	Person data skills self service skills (Worker profile and skills)	X	
	Change work contact information rest service (Contact information)		X
	Retrieve a collection of check ins topics	X	
	Create check in topics		X
	Partially updates an existing check in topic to archived or un archived		X
	Retrieve all external skill level information for a worker you can filter the external skill levels by externalskill ID	X	
	Update external skill levels		X
	Change home contact information rest service (Contact information)		X
	Retrieve a single check in instance	X	
	Delete an existing check in instance		X
	Partially updates an existing check in instance		X
	Get explicit skills for skill enabled	X	
	Save skills a user has		X
	Retrieve a single check in topic instance	X	
	Delete an existing check in topic instance		X
Partially updates an existing check in topic instance		X	

Resource	API endpoint	Export	Import
	Retrieve an existing home contact change event for the person	X	
	Retrieve an existing work contact change event for the person	X	
	Retrieve a collection of check ins	X	
	Create check ins		X
	Retrieve a collection of workers and current staffing information	X	
	Initiate a job change request for a specific worker		X
	Retrieve a single service date information instance	X	
	Retrieve a collection of service dates for the specified worker ID	X	
	Partially updates an existing check in to archived or un archived		X
	Create external skill levels		X
Student academicfoundation v1: Academic calendars	Retrieve the academic year associated with an academic calendar with the specified ID	X	
	Retrieve a collection of academic calendars	X	
	Retrieve a collection of the academic years associated with an academic calendar	X	
	Retrieve the academic calendar with the specified ID	X	
Student academicfoundation v1: Academic levels	Retrieve the academic level with the specified ID	X	
	Retrieve a collection of academic levels	X	
Student academicfoundation v1: Academic periods	Retrieve the academic period with the specified ID	X	
	Retrieve a collection of academic periods	X	
Student academicfoundation v1: Academic units	Retrieve the academic unit with the specified ID	X	
	Retrieve a collection of academic units	X	
Student academicfoundation v1: Educational credentials	Retrieve a collection of educational credentials	X	
	Retrieve the educational credential with the specified ID	X	
Student academicfoundation v1: Programs ofstudy	Retrieve the program of study with the specified ID	X	
	Retrieve a collection of programs of study	X	
	Calculate hypothetical academic progress evaluation		X
	Retrieve academic records (Hypothetical academic progress prompt values)	X	
	Retrieve programs of study (Hypothetical academic progress prompt values)	X	

Resource	API endpoint	Export	Import
Student advising v1: Hypothetical academicprogress	Retrieve students (Hypothetical academic progress prompt values)	X	
Student core v1: Holds	Retrieve a collection of student hold assignments	X	
	Retrieve a single student hold assignment	X	
	Override a student hold		X
	Remove a student hold		X
	Update a student hold		X
	Student core v1: Immigration events	Retrieve an immigration event	X
	Retrieve a dependent immigration data instance for the specified student ID	X	
	Update dependent immigration data		X
	Delete immigration event dependent immigration data		X
	Submit an immigration event		X
	Retrieve an immigration data instance for the specified immigration event	X	
	Update immigration data		X
	Retrieve a collection of dependent immigration data for the specified student ID	X	
	Create dependent immigration data for the specified immigration event		X
	Retrieve a collection of immigration events	X	
	Retrieve a collection of immigration data for the specified immigration event ID	X	
	Create an immigration data with the specified ID		X
Student core v1: Immigration events	Retrieve immigration pages	X	
	Retrieve parameter values for holds academic periods in the student core service.	X	
	Retrieve parameter values for holds academic records in the student core service.	X	
	Retrieve parameter values for holds award items in the student core service.	X	
	Retrieve parameter values for holds award years in the student core service.	X	
	Retrieve parameter values for holds institution in the student core service.	X	
	Retrieve parameter values for holds reasons in the student core service.	X	

Resource	API endpoint	Export	Import
Student core v1: Prompt values	Retrieve parameter values for holds school codes in the student core service.	X	
Student core v1: Students	Retrieve a collection of residence information for the specified student ID	X	
	Retrieve a collection of students	X	
	Retrieve a student instance	X	
	Retrieve a collection of immigration events	X	
	Retrieve an immigration event for the specified student	X	
	Retrieve residence information for the specified student	X	
	Create an apply student hold event		X
	Retrieve a collection of apply student hold events	X	
	Retrieve an apply student hold event instance	X	
Student core v1: Students	Retrieve an apply student hold event instance	X	
Student curriculum v1: Course sections	Manage curriculum management (Student records)	X	
Student curriculum v1: Course subjects	Manage curriculum management (Student records)	X	
Student curriculum v1: Courses	Manage curriculum management (Student records)	X	
Student engagement v1: Students	Retrieve a collection of student holds assigned to the specified student ID	X	
	Retrieve a collection of students	X	
	Retrieve a student instance	X	
	Retrieve a single student hold instance for the specified student	X	
	Retrieve a collection of students	X	
Student finance v1: Students	Retrieve a student instance	X	
	Retrieve a single student payment instance for the specified student ID	X	
	Partially updates an existing student payment for the student instance		X
	Retrieve a collection of student payments	X	
	Create a student payment		X
	Student recruiting v1: Academic requirement evaluation	Calculate evaluation results for potential transfer credit and academic progress	
Student recruiting v1: Academic requirement evaluation	Retrieve parameter values for academic requirement evaluation educational institution in the student recruiting service.	X	
	Retrieve parameter values for academic requirement evaluation external course in the student recruiting service.	X	

Resource	API endpoint	Export	Import
Student recruiting v1: Prompt values	Retrieve parameter values for academic requirement evaluation external grading scheme in the student recruiting service.	X	
	Retrieve parameter values for academic requirement evaluation programs of study in the student recruiting service.	X	
	Retrieve parameter values for academic requirement evaluation unit type in the student recruiting service.	X	
System metrics v1: Active tasks	Retrieve active tasks	X	
System metrics v1: Active usersessions	Retrieve a collection of active user sessions	X	
	Retrieve an active user session	X	
System metrics v1: System metricsoverview	Retrieve system metrics with the specified ID, including queued tasks, running t	X	
	Retrieve system metrics	X	
Talent management v2: Create mentorshipforme	Create a mentorship for the current processing worker where the user is also the mentee		X
Talent management v2: Create mentorshipforworker	Create a mentorship between two workers		X
Talent management v2: Mentorships	Closes the mentorship		X
	Edit the mentorship		X
	Get all mentorships	X	
Talent management v2: Prompt values	Retrieve parameter values for succession plan members in the talent management service.	X	
	Retrieve parameter values for succession plan readiness in the talent management service.	X	
	Retrieve parameter values for succession plan strategies in the talent management service.	X	
	Get succession plan events	X	
	Creates a succession plan event instance for a succession plan		X
	Retrieve a collection of information for succession plan candidates for a succession plan event	X	
	Create a succession plan candidate instance		X
	Retrieve succession plan candidates for the specified succession plan event ID	X	
	Remove a succession plan candidate instance		X

Resource	API endpoint	Export	Import
Talent management v2: Succession planevents	Update a succession plan candidate instance		X
	Submit a succession plan event		X
Talent management v2: Succession plans	Get succession plans	X	
	Create a succession plan		X
	Update time structure		X
Time tracking v3: Prompt values	Retrieve parameter values for time values worker time zone in the time tracking service.	X	
	Retrieve parameter values for time types time entry codes in the time tracking service.	X	
	Retrieve parameter values for time types project plan tasks in the time tracking service.	X	
	Retrieve parameter values for time types projects in the time tracking service.	X	
	Retrieve parameter values for time types default time entry code in the time tracking service.	X	
	Retrieve parameter values for time values out reason in the time tracking service.	X	
Time tracking v3: Time clockevents	Retrieve a collection of time clock events for a worker for a date range	X	
	Create time clock events for specified workers		X
	Retrieve a time clock event	X	
	Update the time clock event for the specified ID		X
	Delete a time clock event		X
Time tracking v3: Time validations	Retrieve a collection of time entry validations	X	
Time tracking v3: Worker timeblocks	Retrieve a worker time block	X	
	Retrieve time blocks for specified workers over a date range	X	
	Create a time review event or time review events		X
	Retrieve a summary of reported hours for a worker over a period	X	
	Retrieve a period from the period schedule the worker is eligible for	X	
	Retrieve a collection of workers and current staffing information	X	
	Create a worker time block		X

Resource	API endpoint	Export	Import
Time tracking v3: Workers	Delete a specified worker time block		X
	Update a specified worker time block		X
Time tracking v5: Prompt values	Retrieve parameter values for enter time by type time type nested in the time tracking service.	X	
	Retrieve parameter values for time types default time entry code in the time tracking service.	X	
	Retrieve parameter values for time types project plan tasks in the time tracking service.	X	
	Retrieve parameter values for time types projects in the time tracking service.	X	
	Retrieve parameter values for time types time entry codes in the time tracking service.	X	
	Retrieve parameter values for time values out reason in the time tracking service.	X	
	Retrieve parameter values for time values positions in the time tracking service.	X	
	Retrieve parameter values for time values worker time zone in the time tracking service.	X	
Time tracking v5: Time attestationprompts	Retrieve a collection of time attestation prompts for a time clock event	X	
Time tracking v5: Time clockevents	Retrieve a collection of time clock events for a worker for a date range	X	
	Create time clock events for specified workers		X
	Retrieve a time clock event	X	
	Update the time clock event for the specified ID		X
	Delete a time clock event		X
Time tracking v5: Time validations	Retrieve a collection of time entry validations	X	
Time tracking v5: Worker timeattestation	Retrieve a worker time attestation	X	
	Retrieve followup time attestation prompt	X	
	Retrieve followup worker time attestation	X	
Time tracking v5: Worker timeblocks	Retrieve time blocks for specified workers over a date range	X	
	Retrieve a worker time block	X	
	Retrieve a collection of workers and current staffing information	X	

Resource	API endpoint	Export	Import
Time tracking v5: Workers	Retrieve a period from the period schedule the worker is eligible for	X	
	Add time review events for the specified worker		X
	Retrieve a summary of reported hours for a worker over a period	X	
	Create a worker time block		X
	Delete a worker time block		X
	Update a worker time block		X
	Get tenant versions	X	
	Delete version		X
	Update/ create actuals versions		X
	Clone version		X
Worktag v1: Validate worktags	Validates worktags		X
	Returns the data from a wql query	X	
	Returns the data from a wql query. the read-only post request accommodates queries greater than 2,048 characters		X
Wql v1: Data sources	Retrieves a collection of data sources, including their primary business objects	X	
	Retrieves a data source and primary business object for the specified ID for use in a wql query	X	
	Retrieves a data source filter of the data source	X	
	Retrieves the data source filter with the specified ID for a specific data source	X	
	Retrieves a field of the data source instance, including the related business object of the field	X	
	Retrieves the field with a specified ID for the specific data source	X
